Reddit Account Warm-Up Guide

Provided by Karma Bazaar

Updated: July 2025

❌ 0. Anti-Detect Browser (NOT RECOMMENDED)

🚨 **Warning:** Operating Reddit accounts via anti-detect browsers results in bans in **95% of all cases**.

📱 All our Reddit accounts are operated **exclusively** on **mobile devices** via the official Reddit app - **not** on browsers.
For long-term success, we strongly advise using phones with mobile proxies only.
Use anti-detect browsers **at your own risk.**

If you still decide to use Anti-Detect Browsers (at your own risk):

🧩 **Recommended Providers:**

- **AdsPower**
- **GoLogin**
- **Incognition**
- **Dolphin Anty**

Most offer free profiles to test.

🍪 Cookie Farming Before Login (Essential)

Warming up your browser is **mandatory** before logging into Reddit:

1. Watch YouTube videos
2. Browse popular sites (Google, news platforms)
3. Read articles, scroll pages, click around
4. Click on ads

This helps build a **natural browsing history** and raises your **reCAPTCHA trust score**.

👉 Check your score here:

https://antcpt.com/score_detector/

✅ **Aim for a score of 0.7+ before logging in!**

If your score is too low, continue cookie farming until it improves.

🔑 Reddit Login Flow (Anti detect browser Only)

To simulate human behavior and trigger Reddit's forced login popup:

1. Go to **Google**
2. Search for any **NSFW subreddit**
3. Click a post → Reddit shows the login wall
4. Log in **manually** or via **Google Auto-Login** (preferred)

🛡️ Static Residential Proxy Users:

If you're using **static proxies**, always check that the IP is **not flagged** by Reddit before logging in.

🚩 Flagged IPs = instant bans.

✅ 1. Operating on Phones (RECOMMENDED)

📱 **Using phones is essential** for successful Reddit marketing.
❌ Accounts run through desktop browsers or ADBs are extremely prone to bans.
📊 Mobile phones generate **far higher trust scores**, making them the safest method.

All our accounts are operated **exclusively** via mobile devices - not browsers.

We've fully transitioned to **mobile farming** due to the **low ban rate** and **high security**.

📲 Best Method: **GeeLark** (Anti-Detect cloud Phone software)

🔗 **Register here:**

https://app.geelark.com/#/register?invite_code=karmabazaar

💸 Use code **"GL666"** for **10% off**

GeeLark allows you to operate mobile Reddit profiles in a controlled, safe, and scalable way:

- Simulates real Android phones
- Attach proxies (HTTP / SOCKS5)
- Runs Reddit as an actual app
- Share access with your VAs

GeeLark is **identical to AdsPower** in user interface - but designed for cloud phones!

⚙️ 1.1. How to Use GeeLark

1. Choose the **"Base" package** with your desired number of profiles

   (Ignore time limits — you can always add minutes: ~$13 for 2000 min)

2. Go to **Applications** → Install **Gmail** + **Reddit**
3. Click **"Create New Profile"**
4. Set a profile name
5. Add your proxy (HTTP or SOCKS5)
6. Choose **Android 13** (the accounts are farmed on Android 13)

Then simply launch the profile and use Reddit like you would on any real device.

🔄 1.2. Alternatives to GeeLark

If you prefer not to use GeeLark, you can:

- Use a real **Android** or **iOS** device
- Install the **Reddit app** manually
- 1 profile per device (unless you have a jailbroken device)
- Use proxy tools like **Shadowrocket** to stay anonymous (Available on PlayStore & AppStore)

📌 **Important:** Pair mobile devices with **mobile proxies** for maximum security.

🌍 3. Country and Proxy

🗽 All our accounts were created and farmed with **U.S.-based mobile proxies.**
📍 That's why we **strongly recommend using U.S. proxies** - Reddit trusts them more.

Proxy Guidelines:

✅ What works:

- **Mobile proxies**

  📱 Best performance, lowest ban rates & works great with phone farming setups like **GeeLark**

- **Static residential proxies** from a reliable private supplier

❌ Avoid:

- **Residential or Datacenter proxies** in general
- **Static residential proxies** from public providers with reused IPs

  ⚠️ Especially avoid OFM-favorite proxies like:

  - ProxyCheap
  - iProyale
  - Gridpanel

These are **overused** and often **flagged by Reddit**.

🔌 Recommended Proxy Provider

We've partnered with a **mobile proxy supplier** that has drastically reduced our ban rates.

We use them for nearly all our operations.
👤 **Telegram Contact:** @jd_ofm

🏷️ Use code **"KarmaBazaar20"** for **20% off**

🔗 Proxy Info Channel: https://t.me/sentracell_info

🧾 4. Initial Login & Profile Setup

Before doing anything, **log in** and set up the basics:

- 👤 Add an **avatar**
- 📝 Write a short **bio**
- 🛑 Don't post or comment yet - just chill

This is just an **example** warm-up - not a one-size-fits-all.

Reddit picks up on patterns, especially when **many people use the same flow** with similar proxies or setups.

👉 **Adapt your routine**. Mix it up. Look like a **real human** - not a bot account.

🔥 Warm-Up Process: Gradual & Low-Key

📅 Day 1

- Rest the account for **24h** after login
- Browse Reddit (5–10 mins total) — spaced out
- No actions — **no likes, comments, or posts**

📅 Day 2

- Explore NSFW content
- Join 5–10 subreddits that match your interests
- Wait at least **6h** after joining
- Then: Leave a few **comments on other people's comments** (avoid original posts)

📅 Day 3

- Leave **3–5 comments** in different threads
- Create **1 low-key post** in a smaller subreddit

  (no spam, no links, no selling yet)

📈 Beyond Day 3

- Slowly increase activity
- Keep commenting/ replying to comments regularly
- Post in **smaller subs (<100k Members)** first to build trust
- Reddit loves **natural engagement**

🔼 5. Upvoting & Upvote Bots (Aggressive Marketing)

Using Upvote manipulation on your account is called the **suicide method** and it gets your accounts banned - every time.

Some last a few weeks, some days, some hours, but **they all get burned**. These should be used as **burner accounts only**.

⚠️ Choose Your Strategy — Never Mix Both:

- **Option A:** Use the **suicide strategy** with throwaway accounts (expect bans)
- **Option B:** Grow **organically** with real engagement and long-term marketing

🚫 But **never combine both** - Reddit will catch on faster, and you'll lose everything.

✅ Upvote Panel We Recommend

If you go the suicide route and need reliable push on posts:

📲 Try **Reddit Top Bot**:

https://t.me/reddittop_bot?start=d47117573efa3238

They offer:

- High-quality upvotes
- Flexible volume options
- Fast delivery and targeting

📊 6. Contributor Quality Score (CQS)

Reddit used to rely mainly on **karma** and **account age** to detect spam.

Today, that system is combined with the **Contributor Quality Score (CQS)** to better evaluate how trustworthy an account is.

📌 This applies to **account-level behavior only** - but things like IP reputation still play a major role.

🔢 CQS Levels:

- Highest, High, Moderate, Low, Lowest

🔍 How to check Your score:

Post in this subreddit to get your CQS rating:

reddit.com/r/WhatIsMyCQS

⚙️ How It Works (based on our testing):

- **+1 point** → Commenting or replying causing a "reply chain", viral posts
- **-1 point** → Getting downvotes, too many posts with no attraction, rulebreaking

---

❌ What Lowers Your Score:

- Not verifying your email
- Excessive posting or upvoting
- Passive or bot-like behavior

Accounts with unverified emails often get stuck with a bad CQS that's hard to recover from.

✅ How to Improve Your CQS:

- Stop posting, and **focus on commenting** for a few days
- **Verify your email**
- Optionally, connect your account to **Google, Apple, or Twitter**
- Turning on **2FA** might also help slightly

🚫 7. Shadowban Check (Before You Start)

Before using the account for anything active, **make sure it's not shadowbanned**:

🔍 Use this tool:

👉 https://cable.ayra.ch/reddit/

✅ Only start engaging once you're 100% sure your posts are **visible**.

📌 **Always** browse Reddit for a few minutes **before posting or commenting**.

🗨 During warm-up:

Never make standalone comments — only reply to other users' comments.

This should stay that way **until at least Day 3**.

🛡 Warranty Policy (Read Carefully)

Our **replacement guarantee** is valid only if the following conditions are met:

✅ Covered

1. **You followed the warm-up guide** (or a similar soft warm-up method)
2. **Your account was banned during warm-up or before any actions**
3. **You're using a high-quality proxy**
4. **You're using a mobile device (Android/iOS)**
5. **The ban happened within 73 hours of purchase**

📱 Accounts are mobile-farmed and optimized for **phone use**.

We only guarantee replacements for mobile setups (except for login bans, which are covered for both PC & phone).

❌ Not Covered

- Aggressive marketing like using upvote bots or spam
- Ignoring the warm-up process
- Using low-quality or reused proxies
- Using the account on a desktop browser without mobile proxy setup

⏳ **Replacement Window: 73 hours** from the moment the account is delivered.

🤝 Support & Community

We're not just here to sell you an account - we're here to help you succeed.

If you've got any questions, run into issues, or just want guidance on the best setup:

💬 **Reach out anytime:** [@karmabazaar](https://t.me/karmabazaar)

We respond quickly and are happy to support you with whatever you need - from setup tips to marketing guides.

👥 **Stay up to date:**

Join our private group for exclusive updates, announcements & bonus content:
